

## **BICYCLE SADDLE**

### **ABSTRACT OF THE DISCLOSURE**

A bicycle saddle is constructed to have a hard bottom shell, a first elastic  
5 layer made of foamed plastics and arranged at the top side of the hard bottom shell, a  
first covering covered on the first elastic layer over the hard bottom shell, and a second  
elastic layer covered on the first covering, the second elastic layer being formed of a  
layer of gel arranged at a top side of the first covering and a second covering covered  
on the layer of gel.
